Kelly Pins

PART NO. HP-100

PART NO. HP-200

PART NO. HP-300

"I have bought pins from numerous suppliers and have made my own, I will say that these pins at minimal equal the best I have ever purchased and definitely better than the ones I have made. Another great thing about the hammer pins are their versatility, I no longer need to run around looking for something to knock out bullets or dirt teeth, definitely saves us time in the field."

200 Series	BB-W05	1.66kg	58.55oz	CALL	15 / box

BEAVER BITS

About our Ripper...

Do you oxy-fuel cut your 101's and 201's to make rippers?

The extreme heat required to cut the material weakens the tool and shortens it's life so we have created a time-saving ready to use Ripper. Quenched and tempered to *Dig Cheaper Faster Longer*.

What do people have to say?

"I've been in this industry for over 15 years and have done like everyone else has in the past and cut down my 101's and 201's to make what we call rippers. I can personally say that I have used the new Beaver Bits Rippers and they are the best I have ever used in marl, gray shale, and cemented clay, bar none."
